

The original expression has the form

$$x^{2 \cdot x} \ln \frac{x}{2^{34} 5^6 7^8 9^{10} 11^{12}}$$

The original expression has new form

$$x^B$$

$$B = 2 \cdot x^{\ln A}$$

$$A = \frac{x}{2^{34} 5^6 7^8 9^{10} 11^{12}}$$
